QUALITY SERVICING

LEITZ Tooling is putting the quality of its tool servicing at the forefront. All Leitz tools are safety tested to BS EN 847 standards.

Customers range from industrial manufacturers to small workshops in every manufacturing sector, be it window and timber construction, panel processing, advanced materials, or furniture making. Leitz believes that when serviced tools leave

one of their services centres, they should be "as new".

"At each of our eight UK service centres across the UK, we pride ourselves knowing that our cutting-edge equipment gives the customer the best result time and time again," says Leitz Tooling national sales manager, Derek Statham. For the full story, please turn to Page 2.

ENTHUSIASM

'We are opening this edition of Xylexpo with great enthusiasm,' president of Acimall, Lorenzo Primulini announced just a few hours before the gates opened.

Looking through the list of exhibitors, you can immediately notice that all categories are represented and the level of participants is high; as I have commented previously, this will be an exhibition with rich innovation content, where companies are presenting the best results of their creativity, knowing that users have become more and more demanding and interested in flexible, easy-to-use technologies that can "think" by themselves, concluded Mr Primulini. For John Enslie's full report, please turn to Pages 9-16.

Specialist wood processing tool

LEADING supplier of CNC routing/cutting and engraving solutions, XYZ International has introduced a new specially designed wood processing tool. Called the Marathon Compression Tool, it is available via the company's online CNC RouterShop division on 24/7 next-day delivery.

Supplied in a choice of diameters and lengths, the Marathon Compression Tool has an advanced cutting geometry and a unique coating that has been specially formulated to protect the cut edge from the high temperatures generated during the routing/cutting process. The combined upwards and downwards spiral geometry of the tool ensures a clean edge finish on both the top and bottom surfaces of the material - an attribute that is of special significance if chipping of double-sided laminates is to be avoided, or when processing natural woods where edge-finishing could present a problem, if alternative standard spiral tools are used.

The Marathon Compression Tool further extends the range of routing/cutting, spare parts and accessories solutions provided by the CNC RouterShop facility. These solutions are continually supplemented through sourcing by XYZ International of the European suppliers. They include high-quality router bits, collets and cones, all of which are compatible with various spindle types, oscillating

and tangential knife blades and/or special-purpose tooling.

Significantly, these tooling solutions also accommodate not only the requirements of XYZ and Pacer machine owners, but also those of virtually any other make of machine, regardless of type and country of origin.

For further information tel: XYZ on 01952 291600. Visit www.cncroutershop.com.

NOW AVAILABLE WITH UPGRADED MOTORS

POCKET ROUTERS FOR CARCASS MANUFACTURE AND FRAME ASSEMBLY

This efficient jointing method is now in widespread use for carcass manufacture for kitchens and bedrooms, drawer units, retail display units, mobile home and caravan interiors. The joint is strong, quick to produce and quick to assemble as it eliminates the problems associated with alignment of mating parts. The system is instantly adaptable to any panel size enabling a variety of different components to be prepared simultaneously. 3 models now available:

- MODEL TSM-10
Portable unit, manually operated, ideal for site work.
- MODEL TSM-21
Floorstanding unit - automatic operation.
- MODEL TSM-35
Heavy duty automatic machine for continuous production.

Why Industrial Woodworking & Panel Processing will work for you!

Industrial Woodworking & Panel Processing

is aimed at the woodworking trade supply sector incorporating those specialising in panel production.

Industrial Woodworking & Panel Processing

acts as a mouthpiece for both the joinery manufacturing trade and panel processors.

Industrial Woodworking & Panel Processing

is published 12 times a year and has an excellent reputation for providing the very best advertising opportunities.

Every reader is sourced by using the latest data base information to ensure that those who receive each title have a specialist interest in the particular sector.

Industrial Woodworking & Panel Processing

brings you up-to-the-minute news covering the whole of Europe as well as the UK. Constantly reflecting the latest industry trends and contains a wealth of information.

Dealing also with the top public relations companies in the woodworking trade sector, we can bring you all the latest news on a regular basis.

The specialist typesetting office is headed by Colin Spray, providing expert knowledge of how to present our news content in a eye-catching design.

Industrial Woodworking & Panel Processing

is published in A3 format and advertisers can be assured that their products and services will be showcased to the right people – those whose task it is to source the correct machinery and equipment for the job!

Industrial Woodworking & Panel Processing

is quite simply the best there is in the market for those involved in the woodworking trade sector!

It makes sense to advertise with us – because **Industrial Woodworking & Panel Processing will work for you!**
