MARTIN'S MASTERPIECE WITH CONNECTCONTROL SYSTEM

THE new T77 premium class sliding table saw from Martin is claimed to be a technological masterpiece. Even in its basic version, you can digitally control up to seven axes with ease.

The cutting speed can be precisely adapted to the requirements of any type of material and the saw blade can be tilted to either one or both sides.

The new networked ConnectControl system, launched for the first time at LIGNA characterises the latest generation of sliding table saws and table milling machines from Martin.

With ConnectControl, Martin is taking into account the increasing digitalisation of the working world.

It offers highly efficient Cloud-supported work in every aspect, providing the possibility of managing your tool data from a central location (typically a company's production planning department).

As a result, all machines with access to ConnectControl technology are updated with the latest data. It is because of this integration that users can add further machines into the system, making it possible to control a whole workshop digitally.

The Cloud-based control system also ensures smooth and streamlined co-operation between several users.

ConnectControl is the umbrella term for the patented control concept that characterises the latest generation of sliding table saws and other machines from Martin.

'We are convinced that with this innovative concept of machine control

we have once again given a noticeable innovative impetus to the entire industry,' says marketing manager at Martin, Michael Mühlendorfer.

With this multi-award-winning Martin invention, users receive a uniquely designed, high-performance machine control system that not only opens up completely new horizons for the user in terms of machine operation, but also opens up the entire world of modern data exchange.

The innovative, patented ConnectControl control system is available for the new T77 sliding table saw, as well as the T66 and on the T14 and T29 spindle moulders.

Thanks to the modular design of ConnectTouch, the permanently installed touch-screen control, ConnectPad, the Apple iPad, with the ConnectApp and the Cloud solution ConnectDrive, the customer has the option of upgrading, or downgrading the control of his machine at any time, even after purchase. This provides a comfortable level of investment security and flexibility.

Needless to say, every machine equipped with ConnectControl can be operated without a docked tablet, as well as without an on-line connection, but also without the possibility of communication to the "outside".

On the new Martin T77 premium class sliding table saw the cutting speed can be precisely adapted to the requirements of any type of material and the saw blade can be tilted to either one, or both sides. Thanks to the modular design of ConnectTouch, the permanently installed touch-screen control, ConnectPad, the Apple iPad, with the ConnectApp and the Cloud solution ConnectDrive, the customer has the option of upgrading, or downgrading the control of his machine at any time.

INDUSTRIAL WOODWORKING & PANEL PROCESSING

JAN-FEB 2024

MAIN FEATURE:
WOODWASTE & DUST
CONTROL
& STAIRCASE MANUFACTURING
PLUS: FURNITURE FITTINGS

COPY DEADLINES:

Editorial & Advertising
December 15th 2023

MAR-APR 2024

MAIN FEATURE:
CNC MACHINERY
PLUS: COMPUTER SOFTWARE

COPY DEADLINES:

Editorial & Advertising
February 23rd 2024

MAY-JUN 2024

MAIN FEATURE:
MATERIAL & FINISHES
SHOW PREVIEW (May 19-22)
PLUS: XYLEXPO PREVIEW (May
21-24)

COPY DEADLINES

Editorial and Advertising:
April 26th 2024

JUL-AUG 2024

MAIN FEATURE:
AUSTRIAN, DUTCH, GERMAN
& SWISS MANUFACTURING
PLUS: ADHESIVES

COPY DEADLINES

Editorial and Advertising:
June 28th 2024

SEP-OCT 2024

MAIN FEATURE:
WOODWASTE & DUST CONTROL
& MACHINERY FOR SOFTWOOD
& PANEL PROCESSING
PLUS: POWER TOOLS

COPY DEADLINES

Editorial and Advertising:
August 30th 2024

NOV-DEC 2024

MAIN FEATURE:
BEST OF THE YEAR 2024
PLUS: HANDLING & LIFTING
EQUIPMENT

COPY DEADLINES

WHY INDUSTRIAL WOODWORKING & PANEL PROCESSING WILL WORK FOR YOU!

Industrial Woodworking & Panel Processing is aimed at the woodworking trade supply sector incorporating those specializing in panel production.

Industrial Woodworking & Panel Processing acts as a mouthpiece for both the joinery manufacturing trade and panel processors.

Industrial Woodworking & Panel Processing is published bi-monthly and has an excellent reputation for providing the very best advertising opportunities. Every reader is sourced by using the latest data base information to ensure that those who receive each title have a specialist interest in the particular sector.

Industrial Woodworking & Panel Processing brings you up-to-date minute news covering the whole of Europe as well as the UK. Constantly reflecting the latest industry trends, **Industrial Woodworking & Panel Processing** contains a wealth of information. Dealing also with the top public relations companies in the woodworking trade sector, we can bring you all the latest news on a regular basis.

The specialist typesetting office is headed by Cheryl Goth, providing expert knowledge of how to present our news content in an eye-catching design.

Industrial Woodworking & Panel Processing is published in A4 format and advertisers can be assured that their products and services will be showcased to the right people – those whose task it is to source the correct machinery and equipment for the job!

Industrial Woodworking & Panel Processing is quite simply the best there is in the market for those involved in the woodworking trade sector!

It makes sense to advertise with us – because **Industrial Woodworking & Panel Processing** will work for you!
